Study of a pre-Linnaean herbarium attributed to Francesco Cupani (1657-1710)

Santa Pulvirenti, Maria Martina Indriolo, Pietro Pavone & Rosanna Maria Stefania Costa

Abstract

PULVIRENTI S., M. M. INDRIOLO, P. PAVONE & R. M. S. COSTA (2015). Study of a pre-Linnaean Herbarium attributed to Francesco Cupani (1657-1710). *Candollea* 70: 67-99. In English, English abstract. DOI: <http://dx.doi.org/10.15553/c2015v701a8>

The aim of this work is the study of one of the two pre-Linnaean herbaria belonging to the University of Catania, attributed to Francesco Cupani, a 17th century Sicilian botanist, specifically the volume with the inventory number “VII f2 Hortus Botanicus Catinensis”. The two collections were previously unknown and found in 1992 as a result of reorganising the Herbarium of Catania University. The volume examined comprises 164 pages with 1-12 specimens on each sheet. Most likely, some samples come from the Misilmeri Garden of the Prince of Cattolica, to which Cupani dedicated great commitment in its creation, while others may have been acquired from exchanges with contemporary scientists; this is testified by the presence of non-Sicilian or extra-European species and by the extensive correspondence between the Sicilian friar and many contemporary botanists. The material in the herbarium comprises phanerogams (610 angiosperms and 5 gymnosperms), along with a small number of cryptogams (14 pteridophytes, 9 algae and 1 lichen), and 4 marine animals are also present. Unfortunately, some samples are partially or entirely damaged or even missing; nonetheless it has been possible to identify most of them. The Cupani's herbarium is compared with some pre-Linnaean herbaria in order to highlight their main similarities and differences.

Introduction

The 17th century Sicilian botanist Francesco Cupani was born in 1657 in Mirto, a small village in the Messina province. He studied theology and then joined the Franciscan order. After a period of teaching in Verona he returned to Sicily and dedicated himself to the study of botany. His interest in plants was influenced by the friendship with Paolo Boccone, naturalist and botanist of good fame in Europe (MONGITORE, 1707; Russo, 1819). Cupani was the author of important floristic works (CUPANI, 1692, 1695, 1696, 1697) and of the unfinished “Panphyton siculum”. Thanks to the patronage of the first Prince of Cattolica, he contributed with great commitment to the creation of a Botanic Garden at Misilmeri (hamlet eight miles from Palermo), known as “Hortus Catholicus” and destined to collect plants for medicinal uses of public interest. With the support of some druggists, as Pietro Citraro and Francesco Scaglione, and with the financial help of the Prince of Cattolica, Cupani contributed to enrich the Garden of Misilmeri with many species coming not only from Sicily but also from others territories (CUPANI, 1696).

Cupani lived in a small Sicilian village (Misilmeri) and he did not belong to any academic circle. Nevertheless, mostly thanks to the Prince of Cattolica, he kept contacts with the most important scientists of his time: William Sherard (English botanist, 1659–1728), John Ray (English naturalist, 1627–1705), Caspar Commelin (Dutch botanist, 1668–1731), Joseph Pitton de Tournefort (French botanist, 1656–1708), Giovanni Battista Trionfetti (Italian botanist, 1656–1708), Johann Georg Volkamer (German naturalist, 1616–1693) and Johannes Böhm (German physician, 1640–ca. 1731). Remarkably thanks to the extensive correspondence with Sherard, he participated in the debate on the method of naming plants (ARBER, 1912). Cupani and his contemporaries did not succeed in devising a “taxonomic system”, although some of them have made significant attempts (GREUTER et al., 2005). The pre-Linnaean botanists certainly contributed to lay the foundations of “modern scientific knowledge”, as Linnaeus himself acknowledged in classifying them as among the “Curious” (LINNAEUS, 1736). Linnaeus used the category of the “Curious” to label a group of authors as important precursors of modern botany. The category has recently been reused by DASTON (2012) to define the non-academic culture of the 1600’s that played an important role in circulating the “new method” (PULVIRENTI et al., 2015, in press). Cupani died in Palermo in 1710.

Cupani and the exchange of information

Thanks to the exchange of illustrated publications, seeds and in particular dried specimens, Cupani developed a real “scientific network” that enabled botanical material to circulate for examination and comparison. The novelty of these scientific exchanges practised by him and other contemporary botanists can be summarised precisely in the extraordinary ability to

build a “scientific network” by making use of all the tools the times allowed (PULVIRENTI et al., 2015, in press).

The conditions favouring the circulation of information were the development of maritime communications in the Mediterranean, the decrease of risk of piracy, the presence of a widespread consular network and the possibility of travelling through Europe and beyond. Alongside exchanging boxes of seeds and publications (replete with drawings and descriptions), the exchange of Horti Sicci represented one of the main tools for developing discussions among the scientists of the period and standardizing classifications. Printing a volume of iconography, was a weighty commitment and the dramatic history of the “Panphyton siculum” (never published, though nearly all the images were engraved) points out this aspect. It should be highlighted that even Linnaeus, praising those he called the “Curious”, makes explicit reference to the merit of many scientists who popularized, at their own expense, the knowledge and comparison of plants (LINNAEUS, 1736). It was much simpler (and also more useful) to circulate collections of exsiccata, which were easier to compare, study and classify, than iconographic documents.

The use of herbaria in scientific communication

The herbaria gathered by Cupani were made with samples collected from the Misilmeri Garden or surrounding areas; it was apparently a thorough task and certainly could not be carried out by only one person. From Cupani’s letters, an intensive system of exchanges (in particular) of herbaria with the main European scientists emerges with clarity; moreover, there were collaborators working under his supervision, as might be interpreted from the letter sent by Sherard, dated 18 October 1696, in which he asked the Sicilian friar to prepare an herbarium (DOLLO, 1979).

The production of herbaria continued long beyond Cupani, as is demonstrated in the correspondence between the Prince of Cattolica (the patron of the Misilmeri Garden) and the scientists of the court of Cosimo III de’ Medici, twenty years or so after the death of the Franciscan friar (TARGIONI-TOZZETTI, 1858; BARONI, 1896; MATTEI, 1906). However, the observations of MATTEI (1906) may be a useful indication for questioning the direct attribution of all the “Herbaria of the Prince of Cattolica” to Cupani. It is perhaps more realistic to imagine a kind of “laboratory” settled and directed, at least during an early stage, by Cupani and afterwards continued and managed by his “collaborators”. It cannot be ruled out that herbaria that might be attributed to what must have been the “laboratory” of the Misilmeri Garden are present in the collections of the most important museums. From time to time, often accidentally, as in our case, some previously unknown collections were discovered (BRULLO & PAVONE, 1993; MAZZOLA & RAIMONDO, 1995). Cupani indicated brief descriptions of the plants that he had studied. However, those descriptions

Fig. 1. – Spine and inventory label of the Cupani Herbarium.

cannot be equated with Linnaean binomials (genus, species). Cupani called his descriptions “polilogus”, i.e. sentences of a few words (CUPANI, 1692, 1695, 1696, 1697). His technique matched a simple requirement of synthesis. Instead, the Linnaean binomial represents a classification system allowing the identification of a genus and a species in a frame of reference (PULVIRENTI et al., 2015, in press).

Cupani's herbaria of Catania University

On the basis of these considerations it is therefore possible to frame the function of the two herbaria belonging to the Department of Biological, Geological and Environmental Sciences, found by chance in 1992 (BRULLO & PAVONE, 1993). These collections are presented as two volumes of exsiccata attributed to Francesco Cupani, of different size and structure, without any information on when they were made. The hypothesis of attributing these herbaria to Cupani derives both from the explicit reference in the title-page as well as the reconstruction of the several transfers of ownership. In the literature, the citations regarding these “Horti Sicci” are rather scant. SCINÀ (1824), albeit speaking more generally of Cupani, simply states that Giovanbattista Caruso “took the trouble to collect all Cupani's papers and kept only the herbarium for himself; for this reason it is nowadays stored in Catania along with Caruso's books” (SCINÀ, 1824; citation translated).

More information was supplied by Salvatore Portal who was a physician-botanist and the holder of a well-known botanical garden on the outskirts of Biancavilla. In his paper of 1836 he mentioned two volumes of exsiccata made by Cupani and claimed that he inherited one of them from his father, who had in turn acquired it in Palermo from the chemist Don Giuseppe Chiarelli (PORTAL, 1836). This volume was entire and in good condition, with the exception of the “title-page and some blank pages at the end”. Portal also pointed out that the other volume, with the title-page “Hortus Catholicus species plantarum autografo Fran. Cupani”, may be found in the library of the Catania University and was not complete as it only contained 190 pages. Portal compared the two volumes and noted that the plants found in his herbarium and those of the Catania University were different in terms of the number of species and arrangement; moreover, the two volumes differed in format and kind of paper used. He also stated that in his volume the plants came from the Garden of the Prince of Cattolica as well as from other localities, whereas the volume stored at the University contained plants exclusively from the Misilmeri Garden. The two volumes found in 1992 and currently kept in the herbarium of the Department of Biological, Geological and Environmental Sciences (CAT), match well Portal's description. The first volume appears to have been entrusted

in 1912 to the Director of the Botanical Institute, Luigi Buscalioni (1863-1954), by the Royal University Library of Catania. The second volume, subject of the present study, is larger than the former and is in a fair state of preservation; it comprises 164 pages, largely containing exsiccata of phanerogams along with some specimens of algae, lichens, pteridophytes and a few marine animals. On the first page of this volume there is a handwritten note by Prof. Emilio Chiovenda (1871-1941), the Director of the Institute of Botany from 1926 to 1929, which helps us in tracing its history. It reads: “This herbarium of C. F. Cupani comes from the library of Doctor Salvatore Portal, minister of Biancavilla; I purchased it on 9. 3. 1927 from the Tirelli bookshop in Catania” (translated). It is unknown how the herbarium passed from the hands of Salvatore Portal to the Tirelli bookseller, which sold it afterwards to Prof. Chiovenda.

The aim of this work is to study one of the two aforementioned pre-Linnaean herbaria attributed to F. Cupani, specifically the volume with the inventory number “VII f2 Hortus Botanicus Catinensis” (Fig. 1-3). This volume was digitized in 2005 under the supervision of Prof. Pietro Pavone in the frame of the initiative “Coordinated Project Catania-Lecce 2000-2006, step 8, Botanic Garden and Herbarium”; this initiative was intended to enhance the cultural heritage of Sicily. Pictures of all samples include in this herbarium are available online at <http://www.dipbot.unict.it/erbario/cupani/index.html>.

Material and methods

A list of all specimens associated to Cupani's historical herbarium was prepared (Table 1), including for each sample the following information:

- a) number of the herbarium sheet under which the sample is currently placed;
- b) Literal transcription of original name proposed in the herbarium (polilogus/polynomial) and local dialect when present. The absence of the name is indicated by “/”, any illegible writing by “?” and the fact that the name noted was transcribed from the index at the end of the volume of exsiccata by “index”;
- c) Current taxonomic identification. Regarding angiosperms, gymnosperms and pteridophytes we have followed treatments such as EURO+MED (2006) and partially GIARDINA et al. (2007) and PIGNATTI (1982). Thus the absence of a scientific name is indicated by “/”, when we were unable to identify the taxon;
- d) state of preservation of the specimen according to three categories: bad (if there are only plant fragments), poor (if the sample is damaged) and good (if the sample displays all its parts). A missing sample is also indicated in the event that only remaining marks or the strip of paper by which it was attached to the sheet were observed.

A list of alphabetically arranged taxa is presented (Appendix 1); this list includes plants of the studied herbarium. Using on-line data (see below) the Cupani's herbarium is compared with some pre-Linnaean herbaria in order to highlight their main similarities and differences.

Results

The volume of exsiccata studied comprises 164 sheets (numbered to 163 but number 57 was erroneously assigned to two different sheets), numbered at the top right corner of each sheet. At the end of the volume there is an index listing nearly all the plants contained in this herbarium arranged by first letter alphabetical order (Fig. 4). Next to, or below, every sample there are original Latin handwritten notes and, sometimes vernacular names. Next to each sample, most probably corresponding to a later addition, a red and blue number written in pencil was made by an unknown hand. In addition, from sheet 108 to 118, another unidentified writer added the correct name of the species in pencil. On every sheet there are between 1 to 12 specimens, depending on the dimensions of the sample (Fig. 5, 6). The samples are arranged on one side of every sheet and fixed with irregularly cut strips of paper and glue. We were not able to detect whether this corresponds to the original mounting proposed for the herbarium or whether it was proposed during a later organisation. The doubt remains because in some cases the imprint of the plant can be seen in a different position; besides it is not known if the system of fixing the specimens with strips was original or alternative to the method using the glue. Either way, it is sure that the plant specimens associated to the herbarium sent to Micheli by the Prince of Cattolica in 1733 were simply glued (BARONI, 1896).

Regarding the nomenclature associated to the specimens, some taxa belonging to the same species have different names (i.e. *Anthyllis vulneraria* L. or *Ononis natrix* L.), while others are classified under the same name (i.e. *Stachys ocymastrum* (L.) Briq. or *Ranunculus flammula* L.). Several reasons suggest that the herbarium was probably re-bound in fairly recent times. In the first place, the binding is entirely different from the one observed in the other volume, the latter believed to still present the original type of binding. Secondly, leafing through the volume one may see that the sheets have been cut at the top and bottom, and perhaps also at the edges; in some cases parts of the samples and/or the numbering are missing. Thirdly, on the back of the volume the sentence “Cupani Hortus Siccus” is written in gold and with characters almost certainly not corresponding to the end of the 17th century.

The page preceding the title-page shows a handwritten note attributed to Chiovenda regarding the transfer of ownership of the volume. The title on this page reads: “plantae siccae - quae omnes in Horto Catholico - crescunt - et multae aliae quae Siciliae - nascuntur terris plerisque locis - auctore Francisco Cupani - sac. theol. magistro siculo - a Myrthensi

- Panormo". However, according to PORTAL (1836), this note may not be original but added later. Between the title-page and the first sheet, there is a coloured tissue overlay that must have been used to protect the dried plants that are highly fragile. Presumably, this protection is not original either. The herbarium is made up of 669 samples. The specimens are distributed as follow: 610 (91.18%) are angiosperms, 14 (2.09%) are pteridophytes, 9 (1.35%) are algae, 5 (0.75%) are gymnosperms, 4 (0.6%) are animals, 1 (0.15%) is a lichen and 26 (3.89%) are missing. Most samples (407, equal to 60.84%) are in a good state of conservation, 181 (27.06%) in a poor state and 55 (8.22%) in bad condition (Fig. 7).

Comparisons with other pre-Linnaean herbaria

Between the late 1600s and the mid-1700s there were numerous "pre-Linnaean" herbaria in Europe, among which should be highlighted: Sherard's herbarium, Bobart the Younger's herbarium, Sloane's herbarium, Clifford's herbarium, Hermann's herbarium, Helwing's herbaria, Münchenbergs's herbarium, and the Salvador's herbarium (see description below). Most of these herbaria have been studied because they are historically interesting from the viewpoint of nomenclature and floristic biodiversity of the pre-Linnaean period (IBÁÑEZ et al., 2008; MENEZES DE SEQUEIRA et al., 2010; SANTOS-GUERRA et al., 2011; ANDEL et al., 2012; SPALIK, 2014). It is difficult to propose thorough comparisons between the herbarium subject of our study to other pre-Linnaean herbaria, especially since most them have been widely restored and/or increased in later periods. The greatest value of Cupani's herbarium is the fact that it has undergone very few rearrangements. Indeed, with the exception of the binding and notes written in pencil, it appears to us being in its original form. Despite these difficulties, here below we highlight some similarities and differences identified between Cupani's herbarium and other contemporary pre-Linnaean herbaria:

1. Cupani's herbarium

Repository: Catania University.

Period of collection: late 1600.

Rearrangements: few (later binding and notes written in pencil).

Bookbinding: single volume.

Total number of specimens: 669.

Specimens on each sheet: 1-12.

Mounting method: strips of paper and glue.

Nomenclature: Latin polynomial (few words) and sometimes vernacular names.

On-line access: <http://www.dipbot.unict.it/erbario/cupani/index.html>.

Fig. 5. – Sheet number 39 of the Cupani Herbarium containing one specimen of *Rosa* L. (Rosaceae).

Fig. 6. – Sheet number 17 of the Cupani Herbarium.

Fig. 7. – Sheet number 1 of the Cupani Herbarium.

2. *Sherard's herbarium*

Repository: Oxford University Herbaria.

Period of collection: from ca. 1680.

Rearrangements: augmented until 1796, rearranged by Dillenius from 1721, by G. C. Druce in the late nineteenth century and, by other botanists during the twentieth century.

Bookbinding: individual sheets.

Total number of specimens: about 20,000.

Specimens on each sheet: usually one.

Mounting method: unknown original arrangement.

Nomenclature: Latin polynomial (few words).

On-line access: <http://herbaria.plants.ox.ac.uk/bol/Sherard/Pages/DBnotes>.

3. *Bobart the Younger's herbarium*

Repository: Oxford University Herbaria.

Period of collection: from ca. 1666.

Rearrangements: rearranged probably by G. C. Druce.

Bookbinding: originally bounded, but now stored as separate sheets in Solander boxes.

Total number of specimens: 2202.

Specimens on each sheet: usually one.

Mounting method: glued plants.

Nomenclature: Latin polynomial (several words) and sometimes English common names.

On-line access: <http://herbaria.plants.ox.ac.uk/bol/bobart>.

4. *Sloane's herbarium*

Repository: Natural History Museum (London).

Period of collection: ca. 1687-1689.

Rearrangements: most likely rearranged.

Bookbinding: seven volumes.

Total number of specimens: 1275.

Specimens on each sheet: usually one.

Mounting method: strips of paper and glue.

Nomenclature: Latin polynomial (many words).

On-line access: <http://www.nhm.ac.uk/research-curation/scientific-resources/collections/botanical-collections/sloane-herbarium/>.

5. *Clifford's herbarium*

Repository: Natural History Museum (London).

Period of collection: 1720s.

Rearrangements: most likely original.

Bookbinding: single unconnected sheets.

Total number of specimens: 3447.

Specimens on each sheet: usually one (many specimens mounted such that they appear to be growing out of an engraved paper urn).

Mounting method: strips of paper and glue.

Nomenclature: Latin polynomial (few words), sometimes inscribed on ornate engraved label.

On-line access: <http://www.nhm.ac.uk/research-curation/scientific-resources/collections/botanical-collections/clifford-herbarium/index.html>.

6. *Hermann's herbarium*

Repository: Natural History Museum (London).

Period of collection: ca. 1672-1677.

Rearrangements: most likely original.

Bookbinding: four volumes of dried plants and one of illustrations.

Total number of specimens: 1215.

Specimens on each sheet: frequently several.

Mounting method: strips of paper and glue.

Nomenclature: Latin polynomial (many words) and often Sinhalese names.

On-line access: <http://www.nhm.ac.uk/research-curation/scientific-resources/collections/botanical-collections/hermann-herbarium/index.html>.

7. *Helwing's herbarium*

Repository: Polish National Library and University of Warsaw.

Period of collection: ca. 1695-1705.

Rearrangements: most likely original.

Bookbinding: two volumes.

Total number of specimens: about 1400.

Specimens on each sheet: usually few.

Mounting method: glued plants.

Nomenclature: Latin polynomial (few words) and sometimes Polish and German common names.

On-line access: <http://polona.pl/item/7971108/0/>;
<http://blog.polona.pl/2014/10/zielnik-helwinga-i/>.

8. *Münchenbergs's herbarium*

Repository: Swedish Museum of Natural History (Stockholm).

Period of collection: ca. 1699–1702.

Rearrangements: most likely original.

Bookbinding: one small volume.

Total number of specimens: about 300.

Specimens on each sheet: usually many.

Mounting method: fixed by a double hole.

Nomenclature: Latin polynomial (many words) and Swedish and German common names.

On-line access: <http://www.nrm.se/forskingochsamlingar/botanik/fbokbo/botaniskhistoria/antoniusmunchenbergsherb.528.html>.

9. *Salvador's herbarium*

Repository: University of Barcelona.

Period of collection: ca. 1700–1745.

Rearrangements: rearranged by Pourret in 1782.

Bookbinding: unknown.

Total number of specimens: 4026 sheets.

Specimens on each sheet: usually few.

Mounting method: sewn using needle and thread.

Nomenclature: Latin polynomial (many words).

On-line access: http://www.ibb.bcn-csic.es/herb_historics_ang.html#Salvador.

Conclusions

In the light of these results, it may be affirmed that specimens associated to the Cupani's herbarium are well preserved, despite the damage over time and the several transfers of ownership. Regarding the taxonomic composition of the herbarium there is an evident prevalence of angiosperms (more than 400 taxa), which are very well-represented according to their species number. In addition to many specimens of Sicilian origin, a certain number are from other geographic regions and some are also exotic (to the Italian flora), probably deriving from exchanged seeds.

The volume of exsiccata studied is of special interest for several reasons. In the first place it is a precious historical document, since it provides a detailed picture of the floristic biodiversity of the period. In the second, regarding the names attributed to the samples, it represents an example of pre-Linnaean attempts to simplify and standardise botanical nomenclature. Moreover the study of this herbarium certainly contributes to our knowledge of pre-Linnaean herbaria as regards the preservation techniques, classification and exchange of plants, which contributed to the origins and development of modern botany.

Acknowledgments

The authors thank Prof. S. Brullo for the critical review of the manuscript, S. Conway for translating the article and Prof. A. Brayley for correcting the English. An anonymous reviewer kindly provided valuable comments to an advanced version of the manuscript.

Table 1. – List of the samples contained in the Cupani Herbarium.

Herbarium sheet number	Plant name as indicated in the Herbarium	Current taxonomic identification	State of preservation
1	/	/	bad
1	Altera corallina rubra G. B.	/	good
1	Corallina	/	good
1	Coggygia Teoph.	/	no sample
1	Orobus	<i>Lathyrus</i> sp.	poor
1	Terebintus mas vulgo scornabecco	<i>Pistacia terebinthus</i> L.	bad
1	Cineraria seu Jacobea marina ?Artemisia marina	<i>Senecio</i> sp.	bad
1	Sanamunda seu Erica Alessandrina Lob.	<i>Thymelaea passerina</i> (L.) Coss. & Germ.	good
2	Alectorolofos seu fistularia	/	poor
2	Tragopogon purpureum Col.	/	bad
2	Tragopogon Col.	/	bad
2	Moluccha aspera	/	no sample
2	Olea boemica	/	bad
2	?	/	no sample
2	Pseudodictamnus Dod.	<i>Ballota pseudodictamnus</i> (L.) Benth.	good
2	Campanula arvensis Dod. sive speculus veneris	<i>Falcata legousia</i> (Ten.) Janch.	good
2	Medica marina Lob.	<i>Medicago marina</i> L.	good
2	Tragoriganus	<i>Micromeria</i> sp.	poor
3	Marina ?	/	no sample
3	?	/	no sample
3	Barba jovis C.D.	<i>Anthyllis barba-jovis</i> L.	good
3	Sive Laudanum Matt. ?	<i>Cistus monspeliensis</i> L.	good
3	Alcea villosa Dalicampij Chab. Lug.	<i>Malva cretica</i> Cav.	poor
3	Helicrisus Syl: C.B.	<i>Phagnalon sordidum</i> (L.) Rchb.	good
3	Cardus erectus seu Acarna valerandi	<i>Picnemon acarna</i> (L.) Cass.	good
4	lacea centauroides	/	no sample
4	/	/	no sample
4	Cariophyllata Matt.	/	poor
4	Gramen Alopiuros	<i>Cynosurus echinatus</i> L.	good
4	Critmum quartus Matth.	<i>Falcaria vulgaris</i> Bernh.	poor
4	Oculus Xrhisti seu Aster ?	<i>Inula oculus-christi</i> L.	good
4	Natrix Plinii seu Ononis no spinosa lutea	<i>Ononis natrix</i> L. subsp. <i>natrix</i>	good
4	Senecio	<i>Senecio</i> sp.	good
4	Senecio minor vulgaris C.B.	<i>Senecio vulgaris</i> L.	poor
5	Aria sive Sorbus ?	/	no sample
5	Altera corallina rubra	/	no sample
5	Ranunculus Narcisi flore Clus	<i>Aconitum</i> sp.	good
5	Pseudodictamnus verticillatus inodorus ?dictamnus Dod.	<i>Ballota pseudodictamnus</i> (L.) Benth.	good
5	Gramen cyperoides	<i>Carex</i> cf. <i>vulpina</i> L.	good
5	Clinopodium pm Matt.	<i>Clinopodium vulgare</i> L.	good
5	Limonius parvulus ?	<i>Limonium</i> sp.	good
5	?Marinus ? Caspari Bahuini	<i>Achillea maritima</i> (L.) Ehrend. & Y. P. Guo	good

Herbarium sheet number	Plant name as indicated in the Herbarium	Current taxonomic identification	State of preservation
5	Peucedanum	<i>Peucedanum</i> sp.	bad
5	Elichriso ? C.B.	<i>Phagnolon saxatile</i> (L.) Cass.	good
5	Polygala ? Ch. sive Polygala ? Lob.	<i>Polygala preslii</i> Spreng.	poor
6	Atriplex marina Matt.	<i>Atriplex prostrata</i> DC.	poor
6	Sophera alpin	<i>Cassia sophera</i> L.	poor
6	Lilius convalius flos Matt.	<i>Convallaria majalis</i> L.	good
6	Napellus flore ceruleo	<i>Delphinium</i> sp.	poor
6	Elianthemus indicus G.B.	<i>Helianthus tuberosus</i> L.	bad
6	/	<i>Paliurus spina-christi</i> Mill.	poor
6	Ranunculus montanum	<i>Ranunculus</i> sp.	bad
6	Tanacetum inodorus	<i>Tanacetum corymbosum</i> (L.) Sch. Bip.	good
7	Alypus monticola thymaelea ? capitulo ?	/	bad
7	Ranunculus globosus	/	good
7	Myriophyllus Mira triphilla Palustre	/	bad
7	Napellus folyi laciniatis	/	no sample
7	?	/	no sample
7	Horminus Dod. sive Horminus sclarea ?C.B. v. matricala	<i>Horminum pyrenaicum</i> L.	bad
7	Amblateum sive orobanche Matt. aut Limodoron Dod. Caudoleionis, Herbatora	<i>Orobanche rapum-genistae</i> Thuill.	good
7	Minus capitulis seu ?echinodis Bocc.	<i>Paronychia echinatula</i> Chater	good
7	Trissago sive Camedris ?	<i>Teucrium chamaedrys</i> L.	good
8	Fenum ?	/	good
8	Ranunculus coriandriflore	/	bad
8	/	/	no sample
8	Alchimilla, Stellaria, pes leonis Ted: Sinnaum Franz. pié de leon	<i>Alchemilla</i> sp.	good
8	Erigerus Dod. sive amellus montanicolus	<i>Aster</i> cf. <i>amellus</i> L.	good
8	Clynopodium Dios. Pm Acinos Col.	<i>Clinopodium vulgare</i> L.	good
8	Rapistrum monospermo G.B.	<i>Crambe hispanica</i> L.	good
8	/	<i>Paliurus spina-christi</i> Mill.	bad
8	Ranunculus	<i>Ranunculus</i> sp.	good
8	Teucrium vulgare fruticans ?	<i>Teucrium flavum</i> L.	good
9	Clynopodium ?	/	good
9	Corallina	/	good
9	Dryopteris nigra dodonei perperas ?	<i>Asplenium adiantum-nigrum</i> L.	good
9	Cariophyllata montana Ch.	<i>Geum montanum</i> L.	good
9	Triticum vaccinum D:	<i>Melampyrum arvense</i> L.	good
9	Pistactium ? v. fasruchi	<i>Pistacia vera</i> L.	good
9	Scabiosa minor ?	<i>Scabiosa columbaria</i> L.	good
9	Talictum ?	<i>Thalictrum</i> sp.	good
9	Pigamus Dod: ut asservit Dodon : aliqui vocant Rhabarbarus spurius, Hist: Thalictus magnus	<i>Thalictrum</i> sp.	good
10	Aconitus lycoctenus 3° Matt.	<i>Aconitum</i> sp.	good
10	Ranunculus narcisi flore	<i>Aconitum</i> sp.	good
10	Flos eius de Anagiris altera	<i>Anagyris foetida</i> L.	poor

Herbarium sheet number	Plant name as indicated in the Herbarium	Current taxonomic identification	State of preservation
10	Vulvaria D.C.	<i>Chenopodium vulvaria</i> L.	good
10	Genzianella minima latifolia ?	<i>Gentiana clusii</i> E. P. Perrier & Sonjeon	good
10	Persica sive Hydropiper M. v. pipi d'acqua	<i>Persicaria maculosa</i> (L.) Gray	bad
10	Lichnis sylvestris ?	<i>Silene</i> sp.	good
11	Alga membranacea C.B.	/	good
11	/	/	good
11	/	/	good
11	/	/	good
11	/	/	good
11	/	/	good
11	Stella marina	/	good
12	Chelidonium foliys laciniatis	/	bad
12	/	/	good
12	?	/	poor
12	Gelsominum luteus	/	bad
12	Cardus stellatus D.	<i>Centaurea calcitrapa</i> L.	poor
12	Lamium luteus D.?	<i>Lamium galeobdolon</i> (L.) Crantz	good
12	/	<i>Scorzonera</i> sp.	good
12	Talictum minus	<i>Thalictrum minus</i> L.	good
13	Centaureum vulg. lacea centauroides	<i>Centaurea</i> sp.	good
13	Campanula arvensis Dod. Viola tetragina onobrichis ?Speculum-veneris	<i>Falcata legousia</i> (Ten.) Janch.	good
13	Persicaria ?	<i>Polygonum</i> sp.	good
13	Ocymum valentinus CB.	<i>Stachys ocymastrum</i> (L.) Briq.	good
13	Urtica maxima canadensis	<i>Urtica</i> sp.	poor
14	lacea capite spinoso	<i>Centaurea seridis</i> subsp. <i>sonchifolia</i> (L.) Greuter	good
14	/	<i>Erigeron</i> sp.	good
14	Ornus ?Fraxinus minor sylvestris C.B.	<i>Fraxinus ornus</i> L.	good
14	Persicaria	<i>Polygonum</i> sp.	good
14	Apios Dod.	<i>Bituminaria bituminosa</i> (L.) C. H. Stirt.	good
14	Salvia angustifolia	<i>Salvia officinalis</i> L.	good
14	Ocymastrum valentinus	<i>Stachys ocymastrum</i> (L.) Briq.	good
15	Ononis non spinosa lutea	/	bad
15	/	/	no sample
15	/	/	no sample
15	Clematis flore pleno coeruleo G.B.	<i>Clematis</i> sp.	good
15	Rubia maxima narbonensis Col	<i>Crucianella maritima</i> L.	poor
15	Rubia ? Jo Bauh. Mollugo palustris	<i>Galium rotundifolium</i> L.	good
15	Paliurus ?	<i>Paliurus spina-christi</i> Mill.	poor
15	Ranunculus flammeus	<i>Ranunculus flammula</i> L.	poor
15	Rubia maior Mat.	<i>Rubia peregrina</i> L.	good
15	Molle arbor clusii sive Lentiscus peruvianus	<i>Schinus molle</i> L.	good
16	Ebulus laciniatus folii Cor.	/	good

Herbarium sheet number	Plant name as indicated in the Herbarium	Current taxonomic identification	State of preservation
16	Centaurius minus vulg. Brundolitta	<i>Centaurium erythraea</i> Rafn	good
16	Circea foli ?	<i>Circaea lutetiana</i> L.	good
16	Melilotus coronaria Ch.	<i>Dorycnium hirsutum</i> (L.) Ser.	good
16	/	<i>Euphorbia paralias</i> L.	poor
16	Filipendula	<i>Filipendula vulgaris</i> Moench	poor
16	Chamedrius thimi folii elianthemus thimifolio Ch.	<i>Fumana thymifolia</i> (L.) Spach ex Webb.	good
16	Alsine	<i>Minuartia verna</i> (L.) Hiern	good
16	Paronichia r. Matt.	<i>Polycarpon tetraphyllum</i> (L.) L.	good
17	Filix ramosa	/	good
17	/	/	poor
17	/	/	no sample
17	Buglossum	<i>Anchusa</i> sp.	good
17	Pilosella Dod.	<i>Antennaria dioica</i> (L.) Gaertn.	good
17	Cirsus	<i>Carduus defloratus</i> L.	poor
17	Limonius minus Ch	<i>Limonium</i> sp.	good
17	/	<i>Lythrum junceum</i> Banks & Sol.	good
17	Medica marina Lob.	<i>Medicago marina</i> L.	good
17	Ononis ? Bauh.	<i>Ononis</i> sp.	good
17	Ranunculus flammeus	<i>Ranunculus flammula</i> L.	good
17	Citiso	<i>Genista monspessulana</i> (L.) L. A. S. Johnson	good
18	Ligusticum alterus	<i>Angelica sylvestris</i> L.	good
18	Erigerus Dod. sive amellus montanicolum	<i>Aster cf. amellus</i> L.	good
18	Carduus Cirsis species	<i>Carduus defloratus</i> L.	good
18	Gramen leucanthemum	<i>Cerastium arvense</i> L.	good
18	/	<i>Dorycnium pentaphyllum</i> Scop.	good
18	Stecas crispifolii (index) ?	<i>Lavandula dentata</i> L.	poor
19	Pseudo Dictamnus	<i>Ballota pseudodictamnus</i> (L.) Benth.	good
19	lacea centauroides (index)	<i>Centaurea</i> sp.	poor
19	Orminus	<i>Horminum pyrenaicum</i> L.	good
19	Lisimachia ?	<i>Melampyrum</i> sp.	good
19	Linum umbilicatus	<i>Omphalodes linifolia</i> (L.) Moench	good
20	Atriplex (index)	<i>Atriplex prostrata</i> DC.	good
20	lacea centauroides	<i>Centaurea</i> sp.	good
20	/	<i>Inula helenium</i> L.	good
20	Salvia	<i>Salvia officinalis</i> L.	good
20	Tragopogon flore ?rubense Lob.	<i>Scorzonera undulata</i> subsp. <i>deliciosa</i> (Guss.) Maire	good
20	Urtica 3	<i>Urtica dioica</i> L.	good
21	?	/	good
21	Alcea villosa ?	<i>Althea hirsuta</i> L.	good
21	Thlaspi minus quibusdam aliis Alysson minus nasturtius tragi	<i>Alyssum</i> sp.	good
21	Lisymachia siliquosa	<i>Epilobium lanceolatum</i> Sebast. & Mauri	good
21	Epimedium Plinii ?	<i>Epimedium alpinum</i> L.	good
21	Urtica iners	<i>Lamium garganicum</i> L.	good

Herbarium sheet number	Plant name as indicated in the Herbarium	Current taxonomic identification	State of preservation
21	Orchis	<i>Orchis</i> sp.	poor
21	Frumentus indicus	<i>Zea mays</i> L.	good
22	Blitum (index)	/	good
22	?	<i>Arabis turrita</i> L.	good
22	Acarna foli	<i>Carlina sicula</i> Ten.	good

Appendix 1. – Taxonomic index.

- Abies alba* Mill.
Acacia sp.
Acanthus mollis L. subsp. *mollis*
Acer campestre L.
Achillea maritima (L.) Ehrend. & Y. P. Guo
Achillea millefolium L.
Achillea sp.
Acinos alpinus (L.) Moench
Aconitum sp.
Adenostyles sp.
Adiantum capillus-veneris L.
Adonis annua L. subsp. *annua*
Agrostemma githago L.
Ajuga chamaepitys (L.) Schreb.
Ajuga orientalis L.
Alchemilla sp.
Allium chamaemoly L.
Allium siculum Ucria
Allium subvillosum Salzm. ex Schult. & Schult. f.
Althaea officinalis L.
Althea hirsuta L.
Alyssum sp.
Amaranthus deflexus L.
Amaranthus retroflexus L.
Amaranthus sp.
Ammi sp.
Anagyris foetida L.
Anchusa sp.
Anemone apennina L.
Angelica sylvestris L.
Anisantha madritensis (L.) Nevski
Antennaria dioica (L.) Gaertn.
Anthemis cotula L.
Anthemis sp.
Anthriscus cerefolium (L.) Hoffm.
Anthriscus sp.
Anthyllis barba-jovis L.
Anthyllis vulneraria L.
Antirrhinum majus L.
Apium sp.
Aquilegia vulgaris L.
Arabis alpina subsp. *caucasica* (Willd.) Briq.
Arabis turrita L.
Arbutus unedo L.
Arctium minus (Hill) Bernh.
Aremonia agrimonioides (L.) DC.
Arisarum vulgare O. Targ. Tozz.
Aristolochia sicula Tineo
Artemisia absinthium L.
Artemisia pontica L.
Artemisia verlotiorum Lamotte
Arundo donax L.
Asparagus albus L.
Asparagus officinalis L.
Asperula aristata L. f.
Asperula arvensis L.
Asplenium adiantum-nigrum L.
Asplenium ceterach L.
Asplenium ruta-muraria L.
Asplenium scolopendrium L.
Asplenium trichomanes L.
Aster cf. *amellus* L.
Astracantha sicula (Raf.) Greuter
Athamanta sp.
Atractylis cancellata L.
Atriplex halimus L.
Atriplex prostrata DC.
Ballota pseudodictamnus (L.) Benth.
Bellardia trixago (L.) All.
Bellis perennis L.
Biarum tenuifolium (L.) Schott
Biscutella lyrata L.
Bituminaria bituminosa (L.) C. H. Stirt.
Blechnum spicant (L.) Roth
Borago officinalis L.
Brassica rapa subsp. *campestris* (L.) A. R. Clapham
Briza maxima L.
Briza minor L.
Bryonia cretica subsp. *dioica* (Jacq.) Tutin
Bubon macedonicum L.
Buglossoides arvensis (L.) I. M. Johnst.
Bupleurum fruticosum L.
Cachrys sicula L.
Calendula stellata Cav.
Calystegia soldanella (L.) Roem. & Schult.
Campanula dichotoma L.
Camphorosma monspeliaca L.
Canna indica L.
Carduus defloratus L.
Carduus pycnocephalus L.
Carex cf. *vulpina* L.
Carex cuprina (Heuff.) A. Kern.
Carex sp.
Carlina sicula Ten.
Carthamus pinnatus Desf.
Cassia sophera L.
Celtis australis L.
Centaurea calcitrapa L.
Centaurea seridis subsp. *sonchifolia* (L.) Greuter
Centaurea sp.
Centaurium erythraea Rafn
Cerastium arvense L.
Cerastium sp.
Cerastium tomentosum L.
Cercis siliquastrum L.
Cerinthe major L.
Chamaemelum fuscatum (Brot.) Vasc.
Chelidonium majus L.
Chenopodium murale L.
Chenopodium vulvaria L.
Chrozophora tinctoria (L.) A. Juss.
Circaea lutetiana L.
Cistus incanus L.
Cistus monspeliensis L.
Citrus limon (L.) Burm. f.
Clematis cirrhosa L.
Clematis integrifolia L.
Clematis sp.
Clematis vitalba L.
Clinopodium vulgare L.
Coix lacryma-jobi L.
Conium maculatum L.
Consolida sp.
Convallaria majalis L.
Convolvulus cneorum L.
Crambe hispanica L.
Crithmum maritimum L.
Crucianella maritima L.
Cuscuta epithymum (L.) L.
Cyanus segetum Hill
Cynanchum acutum L.
Cynosurus echinatus L.
Cyperus capitatus Vand.
Cyperus papyrus L.
Cyperus sp.
Cytisus villosus Pourr.
Daphne alpina L.
Delphinium fissum Waldst. & Kit.
Delphinium sp.
Delphinium staphysagria L.
Dianthus deltoides L.
Dictamnus albus L.
Diplotaxis erucoides (L.) DC.
Dorycnium hirsutum (L.) Ser.
Dorycnium pentaphyllum Scop.
Dryopteris filix-mas (L.) Schott
Ecballium elaterium (L.) A. Rich.
Elaeagnus angustifolia L.
Emex spinosa (L.) Campd.
Epilobium lanceolatum Sebast. & Mauri
Epimedium alpinum L.
Eragrostis cilianensis (All.) Janch.
Erica multiflora L.
Erigeron sp.
Erodium moschatum (L.) L'Hér.
Erysimum cheiri (L.) Crantz
Euphorbia chamaesyce L.
Euphorbia paralias L.
Euphorbia sp.
Falcaria vulgaris Bernh.
Falcata legousia (Ten.) Janch.
Fedia cornucopiae (L.) Gaertn.

- Filipendula vulgaris* Moench
Fragaria vesca L.
Fraxinus ornus L.
Fumana thymifolia (L.) Spach ex Webb.
Fumaria sp.
Galega officinalis L.
Galium aparine L.
Galium rotundifolium L.
Genista gasparrini (Guss.) C. Presl
Genista monspessulana (L.) L. A. S. Johnson
Gentiana clusii E. P. Perrier & Songeon
Geranium pyrenaicum Burm. f.
Geranium robertianum L.
Geranium sp.
Geranium versicolor L.
Geum montanum L.
Geum urbanum L.
Gladiolus sp.
Glaucium corniculatum (L.) Rudolph
Glaucium flavum Crantz
Glebionis segetum (L.) Fourr.
Gomphocarpus fruticosus (L.) W. T. Aiton
Hedera helix L.
Hedysarum coronarium L.
Hedysarum canadense L.
Helianthus tuberosus L.
Helichrysum pendulum (C. Presl) C. Presl
Helichrysum sp.
Heliotropium europaeum L.
Heliotropium supinum L.
Helleborus sp.
Herniaria glabra subsp. *nebrodensis* Nyman
Hibiscus rosa-sinensis L.
Hieracium sp.
Hippocrepis emerus (L.) Lassen subsp. *emerus*
Horminum pyrenaicum L.
Humulus lupulus L.
Hypericum perforatum L.
Iberis semperflorens L.
Ilex aquifolium L.
Impatiens sp.
Inula conyzae (Griess.) DC.
Inula helenium L.
Inula oculus-christi L.
Iris planifolia (Mill.) Fiori & Paol.
Jacobaea ambigua (Biv.) Pelser & Veldkamp
Juniperus cf. *sabina* L.
Juniperus phoenicea L.
Lamium galeobdolon (L.) Crantz
Lamium garganicum L.
Lamium sp.
Lathyrus aphaca L.
Lathyrus gorgonii Parl.
Lathyrus ochrus (L.) DC.
Lathyrus sp.
Laurus sp.
Lavandula angustifolia Mill.
Lavandula dentata L.
Lavandula sp.
Lavandula stoechas L.
Legousia speculum-veneris (L.) Chaix
Leontodon tuberosum L.
Leonurus cardiaca L.
Ligustrum vulgare L.
Limonium narbonense Mill.
Limonium sp.
Linaria purpurea (L.) Mill.
Linaria reflexa (L.) Desf.
