BioOne Complete (complete.BioOne.org) is a full-text database of 200 subscribed and open-access titles in the biological, ecological, and environmental sciences published by nonprofit societies, associations, museums, institutions, and presses.

Your use of this PDF, the BioOne Complete website, and all posted and associated content indicates your acceptance of BioOne's Terms of Use, available at www.bioone.org/terms-of-use.

Usage of BioOne Complete content is strictly limited to personal, educational, and non - commercial use. Commercial inquiries or rights and permissions requests should be directed to the individual publisher as copyright holder.

BioOne sees sustainable scholarly publishing as an inherently collaborative enterprise connecting authors, nonprofit publishers, academic institutions, research libraries, and research funders in the common goal of maximizing access to critical research.

Corrigendum:

Regarding: Subfamilies Acridinae, Gomphocerinae and Oedipodinae are “fuzzy sets”: a proposal for a common African origin (JOR 20(2): 173-190)

By WILLIAM CHAPCO AND DANIEL CONTRERAS

Page 182, column 2, paragraph 2, the last sentence should be replaced with:

Morphacris has not yet been assigned to tribe, although an earlier version of OSF (Petit *et al.* 2006) placed the genus within the (North American) tribe Tropodolophini, clearly an error. Studies of wing venation characters by Petit *et al.* (2006) also dismiss such an affiliation and instead suggest a possible connection with the Tribe Locustini, a result supported by the present molecular data.
